# Plan Efficiently Build Sustainably

Hey vyzn! Help me improve a project.

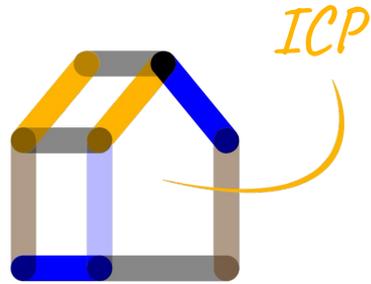

Sure. Just give me a minute!

A 2% reduction in the window area on the south side results in lower CO2 emissions, increased comfort, and reduced costs.

Obtain all reports and documents required for various certifications.

# Success Story

## DISTRICT KANZLEI by ABZ

### Challenge

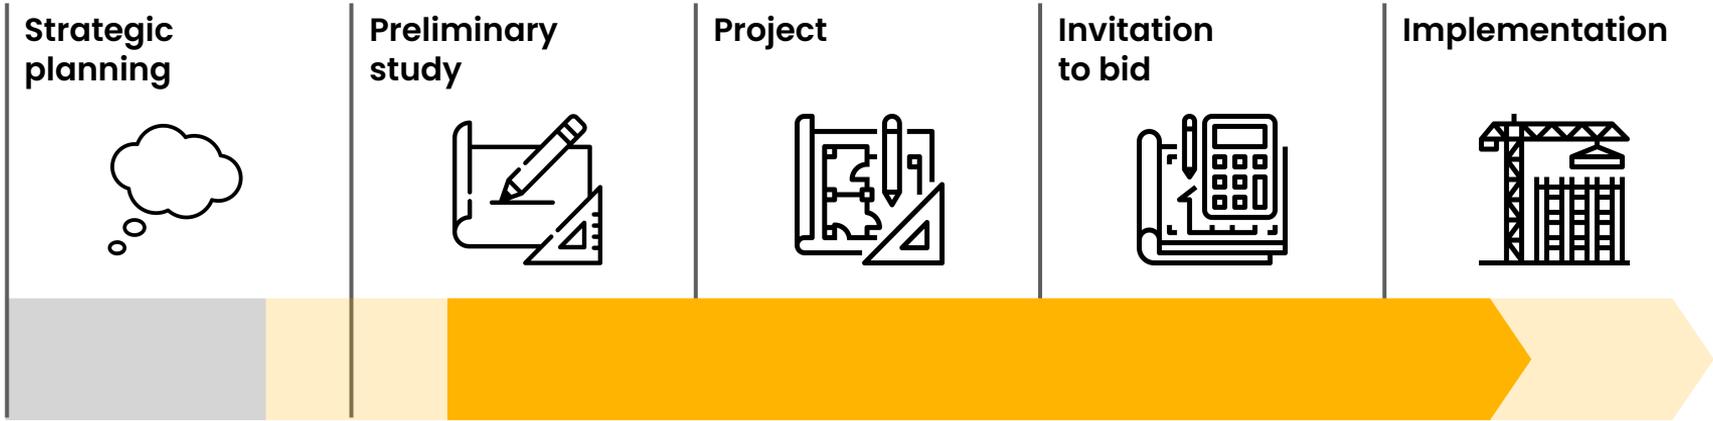

- **Build affordable apartments** that meet the housing subsidy requirements of the City of Zurich
- **Identify and compare sustainable construction methods** to reduce CO2 emissions to a minimum

Allgemeine Baugenossenschaft Zürich

- **3D models optimized** using vyzn's AI
- **Automated** analysis and rapid variant study
- **Multiple project variants compared:** e.g. hybrid construction (massive structure, wooden facade) or two timber construction variants
- Findings show that timber construction causes **20% fewer GHG emissions** compared to hybrid construction. However, the cost analysis indicates that timber construction is **5% more expensive**
- **Fast, actionable insights** that supports decision-making

**248k**
